

Protect Consumers and Small Businesses from Catalytic Converter Theft
Become an Original Cosponsor of the Bipartisan PART Act

ISSUE

Catalytic converters are attractive targets for thieves due to their precious metals, such as rhodium, platinum and palladium. Criminals can easily steal catalytic converters from unattended vehicles, and since catalytic converters are not readily traceable, there is a lucrative market for these stolen parts. These thefts are costing millions of dollars to businesses and individual vehicle owners alike and continue to be a significant problem. Heavy-duty diesel trucks are also vulnerable to theft of their emission control devices known as diesel particulate filters (DPF) and diesel oxidation catalysts (DOC), which contain the same precious metals that attract thieves to steal catalytic converters. **Members of Congress should become an original cosponsor of the “Preventing Auto Recycling Theft Act” (PART Act), which would help law enforcement combat the theft of emission control devices by marking these parts and creating a more transparent market that deters their theft.**

BACKGROUND

As required by the Clean Air Act, catalytic converters reduce toxic emissions from internal combustion engine vehicles using precious metals to remove toxic elements from the exhaust gases. Like catalytic converters in light-duty vehicles, DPFs/DOCs use precious metals to reduce toxic emissions from heavy-duty vehicles. The price of these precious metals rose sharply during the pandemic, contributing to a nearly 900% increase in theft between 2019 and 2023. Stolen catalytic converters can garner anywhere from \$20 to \$350 on the black market, and DPFs/DOCs can get up to \$700, with the replacement cost to vehicle owners averaging over \$2,500. Stolen catalytic converters are difficult to trace since they lack identification numbers tied to the vehicle, which hampers law enforcement from proving ownership and prosecuting theft.

Thefts have also turned [violent](#), with high-profile [tragedies](#) underscoring the urgency of addressing this issue. While several states, such as Minnesota and North Carolina, have enacted laws to address the issue, this crime frequently involves trafficking stolen parts across state lines and a federal framework is needed to aid the efforts of local law enforcement.

The PART Act addresses this crime by: 1) requiring new vehicles to have unique identifying numbers, a VIN or other traceable number, stamped on catalytic converters at the time of assembly; 2) establishing a \$7 million grant program to mark catalytic converters of vehicles already on the road at no cost to vehicle owners; 3) increasing record keeping requirements for purchasers; and 4) establishing a federal criminal penalty for the theft, sale, trafficking or known purchase of stolen catalytic converters of up to five years.

KEY POINTS

- **Theft of emission control devices for heavy-duty trucks should be addressed, otherwise criminals will shift from stealing catalytic converters to DPFs/DOCs, as these devices contain the identical precious metals sought by thieves.** Law enforcement organizations have said that they expect to see DPF/DOC theft rise over the next year.
- **DPFs/DOCs are not currently required to be marked with a VIN or number traceable to a VIN; however, some manufacturers already utilize traceable serial numbers.** Law enforcement has stated that including such tracing in the legislation is critical to help deter the theft and trafficking of stolen emission control devices since it would make it easier to prosecute criminals.
- **The PART Act provides a national framework to help law enforcement combat catalytic converter theft.** Since this crime frequently involves trafficking stolen parts across state lines, a federal standard is needed to help law enforcement.

STATUS

The PART Act, expected to be reintroduced by Reps. Jim Baird (R-Ind.) and Betty McCollum (D-Minn.) and Sens. Amy Klobuchar (D-Minn.) and Bernie Moreno (R-Ohio) will specifically include DPFs and DOCs. NADA and 119 other organizations sent a [letter](#) to Congress supporting passage of the PART Act last year. **Members are urged to become an original cosponsor of the PART Act to help curb the growing national problem of emission control device theft.**
